

Ex No: 11

Date: 20.3.19

Question: 1

Write a PHP program to copy the student details from one text file into another text file. The student details include register number, name, school and marks. Upload the copied file. The uploaded file should be only text file.

Question: 2

Create a XML file and DTD for student details:

Student – root node

Register number – attribute of root node (must be unique and required)

Name – child node

First name and last name - child of name (last name may have 0 occurrence)

Age – child node

graduate – child node (ug/pg)

program – child node (btech/Mtech)

degree – attribute of program (enumerated values including CS/ECE/IT) and required

Validate the XML file against DTD using online XML validator.

Check both as external and internal DTD.
